

STONECRETE

INNOVATIVE PRODUCTION LINE FOR DECORATIVE STONES

Standard and customized solutions can be offered and adapted to a wide range of products.

A full range of different wet-cast products can be produced such as slabs, walls, masonry, steps, edges or veneers of different shapes and sizes on a single line.

Stonecrete can be integrated into existing production lines and works with different types of molds like for instance polyurethane, silicon, ABS and steel. The modular system of the entire Stonecrete line allows various combinations and production capacity, depending on the type and quantity of concrete dosing devices and vibration stations.
