CARROUSEL SYSTEM FOR PRECAST CONCRETE WALL PANELS AND FLOORS

A fully automated production system with integrated curing, storage, and packaging module provides manufactured concrete producers with the most efficient process advantage.

The production of wall panels, slabs and other precast concrete elements is accomplished by moving the molds, on pallets, through the factory without manual crane or physical labor interruption. Preferred stations or cells are created for mold preparation, layout, pouring, and finishing. Each cell is strategically located to optimize plant space, labor, and overall equipment efficiency.
